## GovTech Research Cluster: Latest Research Published - Prof M Helfert & Dr M Ahmed

Cybersecurity of an organization is a challenging task. System logs are the traces of any activity and can be deleted after a system compromise. BCALS provided transparency and unchallengeable proofs of audit logs for investigating any malicious activity and performance monitoring even after a system compromise.

[Read more  
here](#)

System Administrators have unprecedented access in terms of Cybersecurity. They may disable or halt BCALS functionality, we need additional security measures to take care of malicious administrators. Remote malicious administrators are more dangerous because of their geographic location and nonphysical presence. VisTAS is additionally implemented to avoid any malicious administrator's activity which introduced Blockchain based peered authentication and control in a data center.
